

AMENDMENTS TO THE CLAIMS

This listing of claims replaces all prior versions, and listings, of claims in the application:

1           1.       (Cancelled)

1           2.       (Previously Presented) The method of claim 33, wherein displaying the hyperlink  
2 is performed in a browser screen.

1           3.       (Previously Presented) The method of claim 33, further comprising associating  
2 the hyperlink with a telephone number of a remote party.

1           4.       (Cancelled)  
2

1           5.       (Currently Amended) The method of claim [[4]] 33, further comprising  
2 determining if the call session is local or long distance and adding prefix information if the call  
3 session is determined to be long distance.

1           6.       (Currently Amended) A method of making a call, comprising:  
2               displaying a hyperlink;  
3               receiving an indication of user selection of the hyperlink;  
4               generating a call request based on the indication;  
5               associating the hyperlink with a logical identifier of a remote party;  
6               accessing rules information to determine further information to add to the logical  
7 identifier; and  
8               providing charge information appended to the logical identifier for a toll call  
9 based on accessing the rules information, the charge information to be billed for the toll call.

1           7.       (Cancelled)

1           8.       (Currently Amended) A method of making a call, comprising:  
2                   displaying a hyperlink;  
3                   receiving an indication of user selection of the hyperlink; [[and]]  
4                   generating a call request based on the indication; and  
5                   adding calling card information to the call request to enable billing to the calling  
6 card information,  
7                   wherein displaying the hyperlink comprises displaying a hyperlink associated  
8 with a uniform resource locator[[,]] containing a telephone number  
9                   ~~wherein the uniform resource locator contains a telephone number.~~

1           9.       (Previously Presented) The method of claim 8, wherein displaying the hyperlink  
2 comprises displaying a hyperlink associated with a uniform resource locator having a protocol  
3 identifier and a string representing a logical identifier of a callee.

1           10.     (Currently Amended) The method of claim 9, wherein the logical identifier  
2 comprises [[a]] the telephone number.

1           11.     (Original) The method of claim 9, wherein the protocol identifier comprises a  
2 predetermined identifier to identify the uniform resource locator as a telephony-related uniform  
3 resource locator.

1           12.     (Previously Presented) The method of claim 33, further comprising copying the  
2 hyperlink from a first storage location accessible by a browser to a second storage location  
3 accessible by another application routine.

1           13.     (Previously Presented) The method of claim 33, wherein establishing the call  
2 session comprises establishing a call session with a remote terminal.

1           14.     (Currently Amended) A device capable of participating in call sessions over a  
2 data network, comprising:  
3                 a display;  
4                 a hyperlink presentable in the display and selectable by a user; [[and]]  
5                 a controller to generate a call request in response to selection of the hyperlink, the  
6 call request comprising a Session Initiation Protocol (SIP) message,  
7                 the controller to add calling card information to the call request.

1           15.     (Currently Amended) The device of claim 14, further comprising a storage  
2 device containing call rules, the controller to access the call rules to determine how the call  
3 request is to be generated, the call rules specifying that the calling card information is to be  
4 added.

1           16.     (Original) The device of claim 15, the controller to determine if the call request is  
2 a local call or a toll call based on the call rules.

1           17.     (Cancelled)

1           18.     (Previously Presented) A device capable of participating in call sessions over a  
2 data network, comprising:  
3                 a display;  
4                 a hyperlink presentable in the display and selectable by a user;  
5                 a controller to generate a call request in response to selection of the hyperlink; and  
6                 a storage device containing call rules, the controller to access the call rules to  
7 determine how the call request is to be generated,  
8                 the controller to add one or more special characters to provide a function based on  
9 the call rules,  
10                 wherein the function is selected from the group consisting of disabling call  
11 waiting, inserting a pause, and navigating an automated attendant.

1           19.     (Currently Amended) A device capable of participating in call sessions over a  
2 data network, comprising:

3                   a display;  
4                   a hyperlink presentable in the display and selectable by a user;  
5                   a controller to generate a call request to establish a call session in response to  
6 selection of the hyperlink; and  
7                   a storage device containing call rules, the controller to access the call rules to  
8 determine how the call request is to be generated,  
9                   the controller to add charge information to [[a]] the call request based on the call  
10 rules, the charge information to be billed for the call session.

1           20.     (Original) The device of claim 14, wherein the hyperlink is presentable in a  
2 browser screen in the display.

1           21.     (Original) The device of claim 14, wherein the hyperlink is associated with a  
2 label that is presentable in the display and a uniform resource locator that is contained in the call  
3 request.

1           22. – 24. (Cancelled)

1           25.     (Previously Presented) The article of claim 35, wherein the instructions when  
2 executed cause the device to receive the uniform resource locator associated with a  
3 predetermined telephony protocol identifier.

1           26.     (Previously Presented) The article of claim 35, wherein the instructions when  
2 executed cause the device to present the hyperlink in a browser screen.

1           27.     (Cancelled)

1           28.     (Previously Presented) The article of claim 35, wherein the instructions when  
2     executed cause the device to copy the hyperlink from a first storage location accessible by a first  
3     application routine to a second storage location accessible by a second application routine.

1           29.     (Currently Amended) A data signal embodied in a carrier wave and containing  
2     instructions that when executed cause a terminal to:  
3                 receive selection of a hyperlink associated with a label that is displayed by the  
4     terminal and a uniform resource locator, the uniform resource locator containing a logical  
5     identifier;  
6                 access calling rules information to add one or more special characters to enable a  
7     function selected from the group consisting of disabling call waiting, inserting a pause, and  
8     navigating an automated attendant; and  
9                 generate a Session Initiation Protocol (SIP) call request for establishing a call  
10    session over a data network, the SIP call request containing ~~a callee~~ the logical identifier  
11    contained in the uniform resource locator.

1           30.     (Currently Amended) A device capable of participating in call sessions over a  
2     packet-based data network, comprising:  
3                 a display;  
4                 a storage device to store hyperlinks associated with identifiers of callees;  
5                 a controller; and  
6                 a routine executable on the controller to present at least one of the hyperlinks on  
7     the display and to generate a Session Initiation Protocol (SIP) call request to establish a call  
8     session over the packet-based data network in response to selection of the at least one hyperlink,  
9     the routine to further add calling card information to the call request.

1           31.     (Currently Amended) The device of claim 30, further comprising ~~[[an]]~~ a  
2     telephone directory routine executable on the controller, the telephone directory routine to add  
3     the hyperlink to an address directory.

1           32.     (Original) The device of claim 30, further comprising an electronic mail routine  
2 executable on the controller, the electronic mail routine to add the hyperlink to a message.

1           33.     (Currently Amended) A method of making a call, comprising:  
2                 displaying, in a display of a terminal, a hyperlink, wherein the hyperlink is  
3 associated with a logical identifier;  
4                 accessing rules information to determine further information to add to the logical  
5 identifier, the further information to enable at least one of disabling call waiting, inserting a  
6 pause, and navigating an automated call attendant;  
7                 receiving, by the terminal, an indication of user selection of the hyperlink;  
8                 generating, by the terminal, a call request for establishing a call session over a  
9 packet-based network based on the indication;  
10                sending, by the terminal, the call request over the packet-based network;  
11                communicating, by the terminal, voice data over the packet-based network in the  
12 call session,  
13                wherein communicating the voice data over the packet-based network comprises  
14 communicating the voice data over an Internet Protocol network.

1           34.     (Cancelled)

1           35.     (Currently Amended) An article comprising one or more storage media  
2     containing instructions that when executed cause a device to:  
3                 present a hyperlink in a display of the device;  
4                 receive an indication of selection of the hyperlink;  
5                 receive a uniform resource locator associated with the hyperlink; and  
6                 generate a call request containing information in the uniform resource locator, the  
7     call request to establish a call session over a packet-based network, the call request further  
8     containing one or more special characters to enable at least one of disabling call waiting,  
9     inserting a pause, and navigating an automated attendant,  
10                wherein generating the call request comprises generating a Session Initiation  
11     Protocol message.

1           36.     (Cancelled)

1           37.     (Previously Presented) The device of claim 30, wherein the routine comprises a  
2     Session Initiation Protocol stack.

1           38.     (Previously Presented) The device of claim 30, further comprising an Internet  
2     Protocol layer to communicate data in the call session.

1           39.     (Previously Presented) The method of claim 33, wherein sending the call request  
2     comprises sending, by the terminal, a Session Initiation Protocol call request over the packet-  
3     based network.

1           40.     (Previously Presented) The method of claim 8, wherein generating the call  
2     request comprises generating a Session Initiation Protocol (SIP) call request, the SIP call request  
3     containing the telephone number in the uniform resource locator.

1           41.     (Previously Presented) The device of claim 19, wherein the generated call request  
2     comprises a Session Initiation Protocol call request.

Appln. Serial No. 09/652,166  
Amendment Dated January 11, 2006  
Reply to Office Action Mailed October 20, 2005

1            42.    (Cancelled)
